Performance Management Prototype

Trimble Research Labs - Participant Tasks & Post-Session Survey

This document supports a moderated or unmoderated study of the Traqspera Performance Management interactive prototype. Participants complete realistic HR, manager, and employee tasks, then answer the survey to capture usefulness, perceived value, design fit, and gaps.

Prototype: traditional office performance reviews (templates, cycles, workflow steps, self-evaluation, manager review, employee acknowledgement). Built with Trimble Modus Web Components inside a Traqspera-style shell. Data is stored locally in the browser only.

Before the session

- Allow 45-60 minutes total (35-45 min tasks + 10-15 min survey).
- Use a desktop browser (Chrome or Edge recommended). Tablet optional for acknowledgement task.
- Open the hosted prototype URL provided by the study coordinator.
- Use the View as role control to switch HR Admin, Employee, and Manager personas.
- Optional: clear site data for a fresh seed, or work with persisted demo data.

Suggested task paths

Assign each participant a primary persona based on their real job (HR, people manager, or individual contributor). Everyone should try at least one task outside their primary role to stress-test clarity and handoffs.

A. HR Admin / People Operations (required core - ~20 min)

1. Explore the Performance dashboard: scan KPI cards, active cycles, and the All reviews table. Use filters (status, cycle, search) to find a specific review.

2. Open Review groups: create a new group, assign default reviewer rules (e.g. crew manager), add members, and note any unassigned employees warning.

3. Templates: open the template list, edit an existing template (change a question, toggle Required), save, and confirm changes persist after refresh.

4. Create a new template (or duplicate flow via create): add up to several textarea questions, save, and return to the list.

5. Launch a review cycle using the wizard: Cycle details (name, dates) -> Template (select or create) -> Workflow (enable/disable self-evaluation, reorder employee/manager steps, set due dates, optional rating scale) -> Participants (individuals and/or review groups, resolve conflicts if shown) -> Review & Launch. Launch the cycle or save as draft.

6. Open cycle details from the dashboard: review workflow stage cards and drill into a participant review.

7. Open View details on a review: use all tabs (Overview, Self evaluation, Manager review, Side-by-side). Try Download review if shown.

B. Manager (~15 min)

1. Switch to Manager persona. Open Team reviews (Performance -> Team). Scan status badges and due dates.

2. Complete a manager review: open side-by-side form, read employee self-evaluation answers, enter manager responses, optional overall rating if enabled, submit.

3. Open View details for a completed or in-progress direct report; compare Side-by-side tab to the edit form.

C. Employee (~15 min)

1. Switch to Employee persona. Open My Info -> Performance (or employee dashboard) and identify pending tasks.

2. Complete a self-evaluation: answer all required questions and submit.

3. Toggle Mobile layout on the employee experience; repeat or open self-evaluation and assess readability.

4. Complete employee acknowledgement for a review in that stage (checkbox + submit).

5. Open a completed review in read-only detail view.

D. Cross-role mini-scenario (optional - ~10 min)

Facilitator narrates: HR launches a short cycle -> Employee submits self-eval -> Manager submits review -> Employee acknowledges. Participant switches roles at each step and notes confusion or delight.

Task completion checklist (facilitator)

Mark Y/N for each participant after tasks:

- [ ] Dashboard explored with filters
- [ ] Review group created or edited
- [ ] Template edited and saved
- [ ] Cycle launched or saved as draft via wizard
- [ ] Manager review submitted
- [ ] Self-evaluation submitted
- [ ] Acknowledgement completed
- [ ] Review details tabs exercised
- [ ] Mobile employee layout tried

Post-session survey - Section 1: About you

Participant ID / session date: _____

Primary role today (check one): HR / People Ops Manager Individual contributor Other: _____

Years involved in performance reviews (0-1 / 2-5 / 6-10 / 10+):

Organization size (optional): _____

Section 2: Task experience

I could complete the assigned tasks without external help.

Strongl

The steps matched how my organization runs (or would run) performance reviews.

Strongl

Switching roles (HR / Manager / Employee) was understandable for a demo.

Strongl

I always knew what to do next for my current role.

Strongl

Section 3: Usefulness

This prototype would help HR administer review cycles.

Strongl

Managers could efficiently complete reviews with the side-by-side layout.

Strongl

Employees could complete self-evaluation and acknowledgement flows comfortably.

Strongl

Review groups and participant selection would save time vs. manual assignment.

Strongl

The launch cycle wizard covers the configuration I would need before go-live.

Strongl

Review detail tabs give the right information for audit and employee questions.

Strongl

Section 4: Value

Adopting a product like this would be worth the change effort for our organization.

Strongl

The workflow (self-eval, manager review, acknowledgement, optional rating) fits our policy needs.

Strongl

I trust the information architecture (dashboard, templates, groups, team view) for day-to-day work.

Strongl

This would reduce email/spreadsheet work compared to our current process.

Strongl

I would recommend exploring this further with my stakeholders.

Strongl

Section 5: Design and UX

The visual design feels appropriate for Trimble / enterprise HR software.

Strongl

Navigation (Traqspera shell, Performance menu) made it easy to find features.

Strongl

Tables, filters, and status badges communicate progress clearly.

Strongl

Forms (templates, wizard, self-eval, manager review) are easy to read and fill out.

Strongl

Mobile employee layout is adequate for field or tablet use.

Strongl

Error states, validation, and empty states felt trustworthy.

Strongl

The design hit the mark for a modern performance management experience.

Strongl

Section 6: Gaps and additions

What is missing today that would block you from using this in production?

What would you add or change first (features, integrations, reports, permissions)?

Which single screen or flow delighted you? Which frustrated you?

Section 7: Overall

Overall satisfaction with this prototype session.

Strongl

Net Promoter-style question: How likely are you to recommend we continue investing in this direction? (0-10)

Score: ___

Any other comments for the product or research team:

Thank you for participating in Trimble Research Labs. Responses may be used to prioritize roadmap items for Traqspera Performance Management.
